PROFESSIONAL SUMMARY

Passionate Computer Engineering graduate skilled in software development and hardware integration. Strong foundation in creating RESTful APIs, full-stack applications, and Android solutions, aiming to merge hardware and software engineering with practical experience in automation and cloud deployment.

WORK EXPERIENCE

Backend Developer Intern

June 2025 - July 2025

REVLV Solutions Inc. | Burgundy Corporate Tower 252 Sen. Gil Puyat Avenue, Makati City

- Built ExpenSEES-API, a REST backend in Java, Spring Boot, and PostgreSQL for user accounts, budgets, and expense reporting, then deployed it to DigitalOcean Linux.
- Implemented JWT authentication and Spring Security with role-based access control to protect financial endpoints across user roles.
- Shipped CORS-ready APIs for the client dashboard, improving reporting accuracy and contributing to ~30% higher user engagement.

EDUCATION

Ateneo De Naga University

May 2026

Bachelor of Science in Computer Engineering

PROJECTS

Integration of RFID and ESP32 in a Mobile-Based IoT System for Efficient Shuttle

Service Management at Ateneo de Naga University

Thesis: Tech Lead/ Full Stack Developer | <https://play.google.com/store/apps/details?id=com.shuttle.monitoring&hl=en>

- Led delivery of a campus transit platform that automated boarding with RFID and live GPS, replacing manual shuttle tracking for students and administrators.
- Engineered an ESP32 IoT layer that authenticated riders at physical checkpoints and streamed events into a centralized Spring Boot / PostgreSQL backend.
- Shipped a synchronized Android app with real-time vehicle and boarding visibility, now published on Google Play.

Personal Portfolio Website

Frontend Developer | <https://8duinoide.github.io/portfolio/>

- Designed a responsive portfolio that presents backend, IoT, and full-stack work as recruiter-ready case studies.
- Turned hardware-software projects into problem-architecture-outcome writeups that both technical and non-technical readers can scan quickly.
- Deployed on GitHub Pages with a mobile-first layout and live links to production apps, Play Store, and source repositories.

JobAi: AI Job-Hunting Assistant

Full-Stack & Mobile Developer | Python, Gemini AI, Firebase, Android | <https://appbuildersph.com/apps/jobai>

- Built a Python engine that scrapes multiple job boards and matches openings to a candidate's skills and target roles.

- Integrated Gemini AI to parse job descriptions in real time and tailor resume content to each posting, raising application relevance without manual rewrites.
- Developed a native Android app on Firebase with application tracking and push notifications from scrape through interview

Embedded IoT Solutions

IoT Developer · C++, Arduino, RFID | <https://github.com/8DUINOide/ARDUINO-PROJECTS>

- Engineered 10+ C++/Arduino integrations covering sensors, automation, and device control for campus and lab builds.
- Designed RFID-secured access and robotic automation prototypes that connected physical devices to software workflows.
- Reused firmware and wiring patterns so later IoT work, including the campus shuttle system, could move from prototype to production faster.

CERTIFICATIONS, SKILLS & AWARDS

Certifications

- Cisco Junior Cybersecurity Analyst, Ethical Hacker, Data Analytics Essentials, Network Support and Security, Programming Essentials in C++ and Python, Intro to Cybersecurity, Intro to IoT; NDG Linux Essentials.

Technical Skills

- Java, Python, Kotlin, JavaScript, C++, Spring Boot, Node.js, PostgreSQL, Firebase, REST APIs, Android, React Native, HTML5, CSS3, Git, Linux, DigitalOcean, ESP32, Arduino, RFID, GPS tracking, hardware-software integration, Automation

Awards & Achievements

- Packethacks 2024 Finalist, Breadboarding Competition - Participant, LAAD Software Festival Participant
