PROFESSIONAL SUMMARY

Computer Engineering graduate from Ateneo de Naga University. Backend Developer skilled in Spring Boot, Java, and PostgreSQL. Achieved a **90.93% rating** on the CSE Professional level exam in August 2026. Currently selected as **1 of 60 FutureSmart Scholars (Batch 31)** for the AWS re/Start program (DigiPlus Foundation), a 3-month intensive training focused on cloud computing, Linux, Python scripting, networking, and security fundamentals. Passionate about creating robust, scalable solutions and eager to contribute to innovative tech projects while advancing as a developer.

WORK EXPERIENCE

Backend Developer Intern — REVLV Solutions Inc., Makati City | June 2025 – July 2025

- Built **ExpenSEES-API**, a production REST backend in Java, Spring Boot, and PostgreSQL for user accounts, budgets, and expense reporting; deployed to DigitalOcean Linux.
- Implemented JWT authentication and Spring Security with role-based access control to secure financial endpoints across user roles.
- Shipped CORS-ready APIs for the client dashboard, improving reporting accuracy and contributing to ~30% higher user engagement.

EDUCATION

Ateneo de Naga University — Bachelor of Science in Computer Engineering | May 2026

- CSE Professional Level Exam: **90.93%** (August 2026) • Thesis: Campus IoT shuttle system (Ride.ADNU)

PROJECTS

Ride.ADNU – RFID + ESP32 Campus Shuttle IoT System | Tech Lead / Full-Stack
https://appbuildersph.com/apps/ride-adnu

- Led end-to-end delivery of a campus transit platform that automated boarding with RFID + live GPS, replacing manual tracking for students and administrators.
- Engineered ESP32 IoT layer for physical checkpoint authentication; streamed events into Spring Boot / PostgreSQL backend and synchronized Android app.

JobAi – AI Job-Hunting Assistant | Full-Stack & Mobile | Python, Gemini AI, Firebase, Android
https://appbuildersph.com/apps/jobai

- Built Python scraper + matching engine across job boards; integrated Gemini AI to parse descriptions and auto-tailor resume content, raising application relevance.
- Developed native Android app on Firebase with application tracking and push notifications from scrape through interview stage.

Personal Portfolio Website | Frontend
https://8duinoide.github.io/portfolio

- Designed mobile-first responsive portfolio presenting backend, IoT, and full-stack work as recruiter-ready case studies with live production links.

Embedded IoT Solutions | IoT Developer | C++, Arduino, RFID
https://github.com/8DUINOide/ARDUINO-PROJECTS

- Engineered 10+ Arduino/C++ integrations (sensors, automation, RFID access, robotics); patterns reused to accelerate shuttle system from prototype to production.

TECHNICAL SKILLS

Languages: Java, Python, Kotlin, JavaScript, C++
Backend & Frameworks: Spring Boot, Node.js, REST APIs, Firebase | **Databases:** PostgreSQL, Firebase
Mobile: Android, React Native | **Web:** HTML5, CSS3 | **Cloud & DevOps:** Linux, DigitalOcean, Git
Hardware & IoT: ESP32, Arduino, RFID, GPS tracking, Hardware-Software Integration, Automation

CERTIFICATIONS

Cisco Junior Cybersecurity Analyst • Ethical Hacker • Data Analytics Essentials • Network Support and Security • Programming Essentials in C++ and Python • Intro to Cybersecurity • Intro to IoT • NDG Linux Essentials

AWARDS & ACHIEVEMENTS

Packethacks 2024 Finalist • Breadboarding Competition Participant • LAAD Software Festival Participant
